Enterprise Risk Management scan

Rabobank offers a range of products and services to hedge business risks. One example is the Enterprise Risk Management (ERM) scan.

The ERM-scan reveals your business risks. These risks range from standard financial and insurance risks to less obvious risks. Examples include product risks, image risks, personnel risks, environmental risks and continuity risks.

At your request, a team of experts led by your Financial Logistics consultant will conduct an extensive risk scan. It takes the team two or three days to complete the scan.

You then receive advice regarding solutions for setting up an effective system of risk management at your company. You can engage the services of our Corporate Insurance department to hedge the risks. In addition, we can assist you to mitigate your currency and interest risks.
